Re: YRP Jackson's Point Marine Unit – Bi-Weekly Project Update

Period Covered Under Current Update: **August 5 – 16, 2019**

Upcoming construction activities for the YRP Jackson's Point Marine Unit for the duration between August 5 – 16, 2019 will include, but are not limited to the following:

- 1.1 Review of site logistics for mobilization of crew's equipment for excavation
- 1.2 Mobilization of boreholes drilling for geotechnical investigation
- 1.3 Off-site fabrication for boathouse and structural steel

Please be advised that all construction activities are subject to inclement weather or unforeseen site conditions. Streets and intersections adjacent to the construction site remain open to traffic.

#### Notice of West Nile Virus Testing

There have been recent concerns from the community relating to the breeding of mosquitoes in the project area and the resulting potential for West Nile Virus. Thorough investigation involving subject matter experts have been in place since. Amir Kavehei from Public Health arrived at the York Regional Police Marine site on Monday, July 29<sup>th</sup> and performed larval dips from different parts of the channel/pond. A second inspection was conducted on Tuesday, August 6<sup>th</sup> and no larvae were found in our water way. It was further determined that the water on the project site is not stagnant and it is not the reason for any increase in mosquito population. Our site will continue to be monitored, to ensure no larvae are present in the waterway. Amir also informed that there are mosquito traps all over the Region that are rested and results are posted on Public Health's website.
